

MAKE YOUR OWN REVISION NOTES

You will learn your notes by owning your notes!

1. Write and highlight key words
2. Write out definitions
3. Explain what things mean
4. Add diagrams / pictures

Have a go... pick out the key words, explain what they mean, use colour...

The moon is the easiest celestial object to find in the night sky — when it's there. Moon phases and the moon's orbit are a mystery to many. Because it takes 27.3 days both to rotate on its axis *and* to orbit Earth, the Moon always shows us the same face.

We see the Moon because of reflected sunlight. How much of it we see depends on its position in relation to Earth and the Sun.
